An Alliance for
Water Management

Providing a More Complete Range of Water Services:

Clients today expect engineering consultants to provide not only competence, but also depth and breadth in services. They also insist on quality, responsiveness, and cost-effectiveness. As consultants, we must find innovative approaches to meet these expectations.

By creating Kennedy/Jenks/Todd, we offer clients a full-service option that combines the water resource expertise of Todd Engineers with the broader water utility services of Kennedy/Jenks Consultants. The synergy created by the Kennedy/Jenks/Todd team brings a dynamic perspective to water management issues that provides clients with a more complete, comprehensive range of professional services from evaluation through design and startup. Our goal is to help water managers develop optimal water management capabilities by providing the necessary understanding of water systems, analytical tools, state-of-the-art facilities, and financial capacity.

Our Work Together:

Kennedy/Jenks/Todd has evolved through a series of collaborations between the two firms on a variety of projects. Through our working relationship, we have discovered a cultural compatibility in our mutual dedication to technical excellence, quality control, client service, and reciprocal professional respect that makes this alliance a natural outgrowth. Accordingly, we have pooled our resources on groundwater management, water quality issues, and conjunctive use projects.

Benefits to You:

When clients retain Kennedy/Jenks/Todd, they acquire a team that is dedicated to maintaining a long-term relationship. This dedication means that we take the time to learn your issues, policies and procedures. You also receive a wide range of expertise, well-established project management and quality control systems, and a cost-consciousness that results from relationships based on mutual trust and respect. We value our clients and appreciate the assignments that you entrust to us.

History:

Both Kennedy/Jenks Consultants and Todd Engineers have had a long history of serving the water industry, and both have developed successful practices based on technical excellence, strong client relationships, and personalized service.

Kennedy/Jenks Consultants was founded in 1919 by Clyde C. Kennedy, one of the first Masters Degree graduates in the School of Public Health and Sanitary Engineering at the University of California, Berkeley. In the mid-1970s, Kennedy Engineers formed a joint venture with the firm of Jenks & Harrison and, finding that their practices were compatible, the two firms combined forces to become Kennedy/Jenks Engineers. The firm has provided personalized water and wastewater services to clients in the western states for over 80 years.

Todd Engineers has specialized in planning, developing, and protecting groundwater in the U.S. for 25 years. The staff of hydrogeologists, geochemists, and engineers has provided high quality groundwater consulting on projects that include artificial recharge, groundwater basin management, sea water intrusion, and groundwater contamination. Founder David K. Todd, Ph.D., served as Professor of Civil Engineering at the University of California, Berkeley, for many years and is recognized internationally for his textbook, *Groundwater Hydrology*.

Water Management Services: Kennedy/Jenks/Todd provides a full range of services to water managers:

- **Program management**
- **Water resource assessments**
- **Groundwater and surface water management**
- **Contaminant transport, water quality, and treatment evaluations**
- **Conjunctive use and aquifer storage and recovery plans.**
- **Demand forecasting and master planning**
- **Regulatory analysis**
- **Financial feasibility and rate studies**
- **Facility design and construction support**
- **Alternative project delivery, including Design-Build**
- **Startup services and operator training**
- **System optimization**
